ALTO© SUITE

A Comprehensive C/EBT Management System

Peak Pacific's flagship product, **ALTO© Suite** -- Competency Led Evidence Analysis Reporting -- enables organisations to manage and evaluate the practical side of competency and evidence-based training.

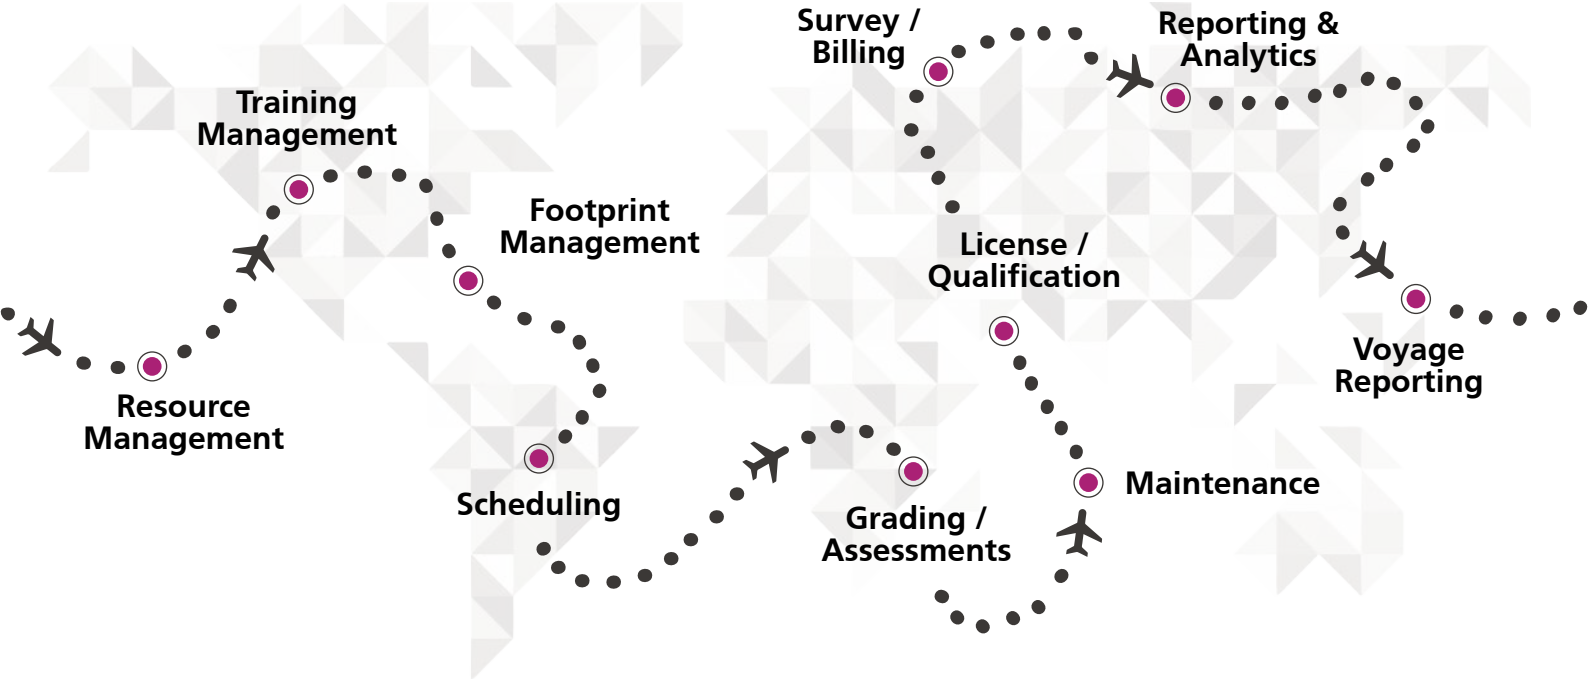

Designed using a robust technology framework, **ALTO© Suite** allows clients to generate quality data from simulator checks classroom training, or line checks and analyse for continuous improvement and business impact.

Developed over a number of years with input from major airlines and the wider pilot and training communities, **ALTO© Suite** has been selected by a number of clients due to its comprehensive framework, analytical capabilities, adaptability, scalability, and affordability.

Best Advance in Learning Management Technology for Compliance Training

Competency Led Evidence Analysis Reporting

This state-of-the-art, web-based application is easy-to-use, configurable by clients, reliable, and based on the latest web technologies. With **ALTO© Suite**, clients can automate processes, create efficient workflows to manage training footprints, resources and facilities, provide timely reports or data that are meaningful and identifies gaps that will improve the quality of future training.

KEY BENEFITS OF ALTO© Suite

Empowered Instructors

Designed to be configurable, **ALTO© Suite** gives maximum flexibility that empowers instructors to plan and configure the system as per their departmental and organisational needs. Completely eliminating the need for paper-based processes, **ALTO© Suite** also enables instructors and training departments to communicate and coordinate more efficiently in terms of planning and utilising resources.

Trainees Take Charge of Training

ALTO© Suite gives trainees easy access to their personal training schedules and performance data, including their license and qualifications status. It serves as a communication channel for trainees to receive notifications and alerts on any changes relating to training events via desktop and mobile devices.

Online/Offline Mode

We designed **ALTO© Suite** with mobility in mind from the start. Even when the tablet is offline:

- Trainees can view their training schedules, upcoming assessments, and results.
- Instructors can view their personal monthly training schedule, related documents, lesson plans, trainee history, grade assessments, and complete reports.

Data will be synchronised back to the master system when Internet connection becomes available.

Data Quality & Agile Decision Making

Designed with the focus to analyse the performance data of trainees and instructors against the company's pre-defined competency markers, benchmarks, or even customised competency markers, **ALTO© Suite** provides real-time evidence- and results-based analytical data about training performance enabling agile decision making by training managers and top management, as well as a centralised, comprehensive auditing tool for regulators.

Contact us today to learn more about how you can use ALTO© Suite to efficiently evaluate and manage your competency and evidence-based training programs.
